Turning off the box

Turning off the box is very easy. You need less than a minute to do it. Do make sure you don't forget putting everything back in the box. This prevents you from running into problems when starting up later on.

---

1. Take out the power cable

Take the power cable of the box out of the power outlet and put it back in the box. This can always be done safely, and you don't need to worry about losing any data.

---

2. Turn off the headset

Turn off the headset by pressing the power button on the side and holding it for a few seconds. It will play a sound and the lights will go off.

3. Pack up and leave

You can now put everything back in and close the box. Please be mindful of cables getting stuck between the lid. Make sure you tighten all 4 safety locks so the box doesn't accidentally open.

After you've closed the box, you are now ready to bring the box with you wherever you want.
