Using the Spectator

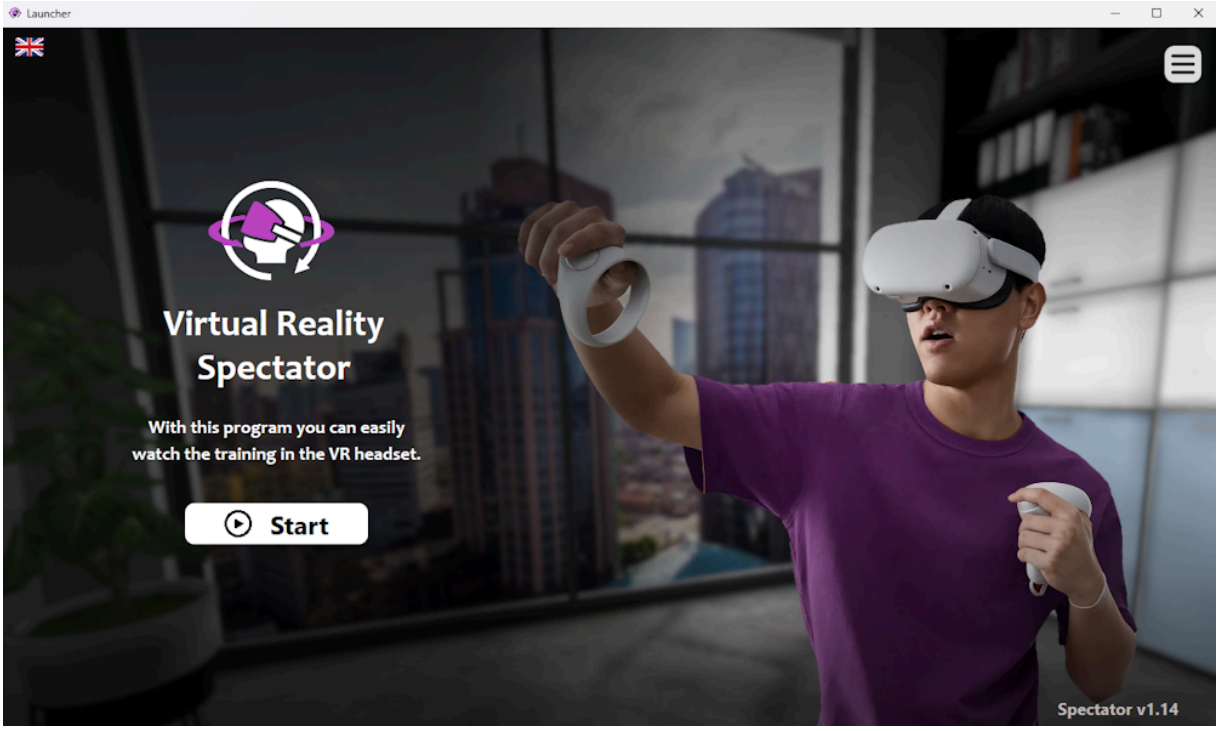
The **Spectator** allows a trainer to watch what is happening inside the VR headset and manage the training session.

With the Spectator you can follow the trainee live and control parts of the training from the computer.

Starting the Spectator

1. Start the system and open the **Launcher**.
2. Press the **Start Spectator** button.
3. The Spectator application will open.

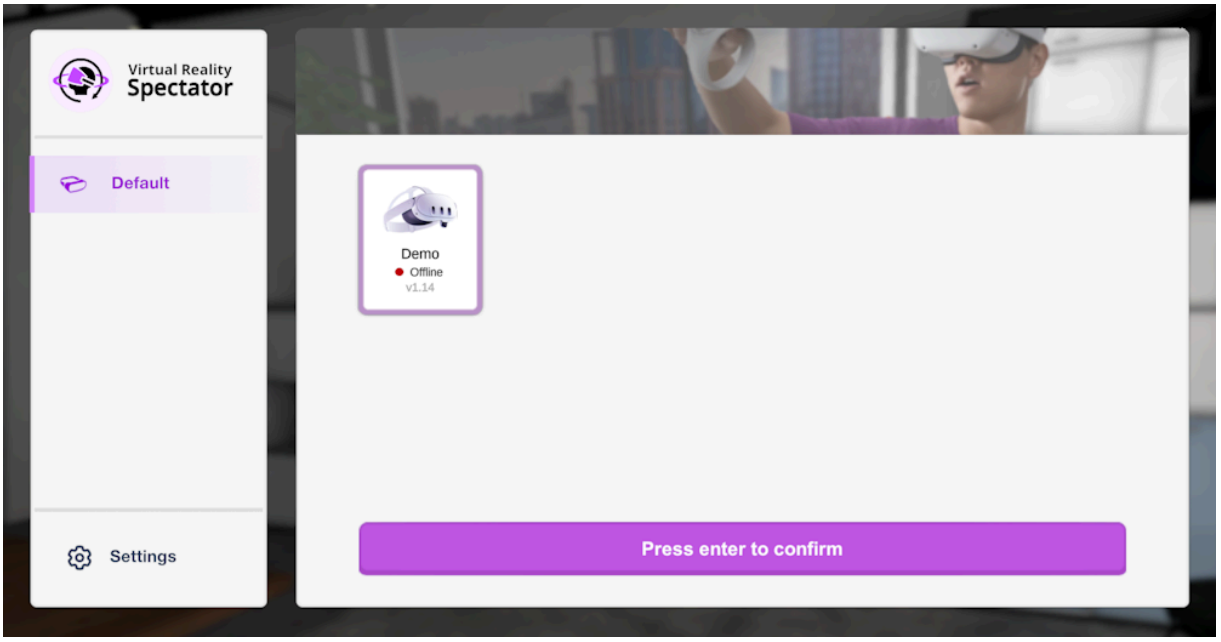
You will see a list of available VR headsets.



Connecting to a headset

1. Select the headset you want to monitor.
2. Press **Confirm**.

Once connected, the screen will show the **live view from the VR headset**.



Managing the training

From the Spectator interface you can control different parts of the training.

For example you can:

- Switch the **language**
- Change the **active student**
- Open **training settings**

This allows the trainer to guide the training session without interrupting the trainee.

In the lobby, you can also **start modules**.

In the module, you can also **skip steps** and **close modules**.

Showing/hiding the controls

The interface buttons are visible in the lobby. While you are in a module, the interface buttons are hidden by default.

- If you want to hide the interface buttons: Press the **arrow in the top-left corner** of the screen.
- If you want to show the interface buttons: Simply **tap anywhere on the screen**.

Changing settings

By pressing the settings button, you can get a menu with a bunch of different spectator options. These are saved on the box, so you don't have to set them again every time you train.
